

FOCUS ON **LEBOULCH**

Over a Century of Experience at Your Service

le Boulch

HISTORY OF LEBOULCH

1921

After the First World War, Mister Leboulch set up his wheelwright workshop in La Vieille-Lyre.

1946

The Leboulch company was then at the forefront of muck spreaders. It was the beginning of the production of steel chassis.

1958

12 workers were employed at the factory. To meet the growing demand, 1,200 m² new buildings were built.

1960

The first monocoque tipping trailers and sprung drawbars marked a turning point in the history of agricultural machinery. The first exports were to Europe and Africa.

1968

The historic 5,000-m² factory was built. The number of employees reached 91 and the number of sales representatives was 7.

1990

The design of the bodies is standardised with "Leboulch patented" swinging doors with large clearance and reinforced arms.

2012-2013

Leboulch changes hands, giving the brand a new impetus. Significant investments were made and all products were redesigned to adapt to market changes.

Leboulch

Today

Leboulch continues to grow thanks to a standardised manufacturing process, modern production processes and an in-house engineering department. Thanks to a new impetus, the facilities have been completely renovated to better meet the needs of the agricultural sector, thanks to efficient internal operation.

FACTORY

The production areas of the Leboulch factory comprise several specialised zones where the key stages of the manufacturing process are carried out.

Warehouses and storage areas
